BLACK & GREY

MADE IN GERMANY

- High usability
- Tailored to particular needs of Black & Grey Artists
- Good wound healing properties
- No Azo-pigments
- Vegan product
- No preservatives
- Produced in compliance with EU ResAP(2008)1 and the German Tattoo Regulation

CHEYENNE

PROFESSIONAL TATTOO EQUIPMENT

CENSORED BLACK

CENSORED BLACK

// Thick viscosity, however easy to apply because it gets thinner while working with it

// High pigment amount, **perfect for cover ups** and very dark highlights, easy to dilute

MADE IN GERMANY

FILLING BLACK

MADE IN GERMANY

FILLING BLACK

// High pigment amount, **perfect for filling**

LINING BLACK

// High pigment amount,
but less than Filling Black,
perfect for lines

MADE IN GERMANY

DARK GREYWASH

The pigment concentration is high enough to create dark shadings and also lines, which are not supposed to be so strong

MEDIUM GREYWASH

Middle strong shadings

LIGHT GREYWASH

Light shadings, for sketching

GREYWASH

MADE IN GERMANY

MADE IN GERMANY

INNOCENT WHITE

// highly concentrated white INK

// white pigment is listed on the 1. place in the INCI list

// pure white pigments, specially designed pigment to achieve

// high stability against weathering

MADE FOR ARTISTS

// Our aim was to achieve a high standard of usability. That´s why we focused on improving several properties like the flow behavior, cleaning or drying properties.

// In several tests we figured out how the right flow profile of Black & Grey ink should be. This was possible due to the valuable efforts of the tattoo artists and analytical methods, which we developed in our laboratories.

// Another aim was to develop an ink wich supports better wound healing by creating an innovative ink formulation. Therefore we tested several formulations and especially different plant extracts with differing concentrations.

// Consequently we found out which concentration provides the best results. The basic formulation is less irritant because of no preservatives and just a small amount of Isopropyl alcohol.

// Ink without preservatives reduce the risk of inflammatory reactions and allergies. Sufficient preservation in our ink is guaranteed by the addition of a specific amount of propylene glycol in combination with a small amount of isopropyl alcohol.

MADE IN GERMANY

High usability (evaluated in plenty of tests)

- Tested with all common machines and modules
- Perfect flow profile for Black & Grey
- Ink doesn't get dry, although the application lasts 10 hours or longer
- Ink can be easily removed with tissue from the skin

Following benefits were reported:

- Less reddened skin
- Less scurf
- Less dry skin

This can affect the following issues:

- Better results with better wound healing
- Smaller inflammatory reaction means less activity of immune system, which carries pigments away

Hamamelis Extract:

- Hemostatic, anti-inflammatory, astringent, supporting wound healing
- Astringent means that less lymph fluids pour out of the skin and therefore more pigments will stay in the skin

Calendula Extract:

- Anti-inflammatory, supports the rebuilding of new cells
