

# The Hawk

New ideas for an old art form

**CHEYENNE**<sup>®</sup>  
PROFESSIONAL TATTOO EQUIPMENT

"People look for a connecting link between body and soul.  
Tattoo is the best way for them to express this physically." John Long of Shanghai

[www.cheyenne-tattoo.com](http://www.cheyenne-tattoo.com)

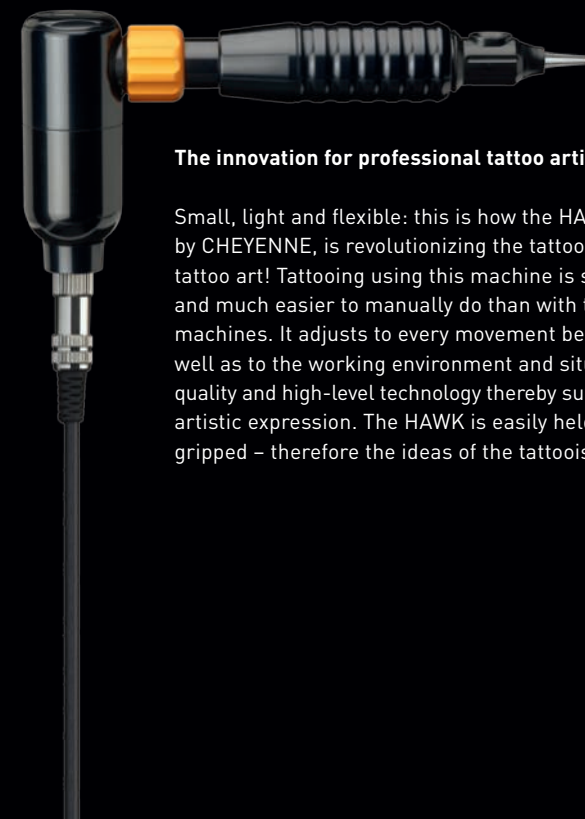

**A sensitive companion of best quality!**

The high sensitivity of the HAWK reacts directly to the different skin types and is therefore suitable for every skin area. In addition, thanks to the ergonomic handle it lays quite well in one's hand and can be precisely guided due to this. Very silent running during operation also ensures comfortable and stress-free work with a low level of vibration.

# CHEYENNE – HAWK

All-in-one. Powerful strokes and quick punctures. A wide variety of needles available. Easy handling and use.

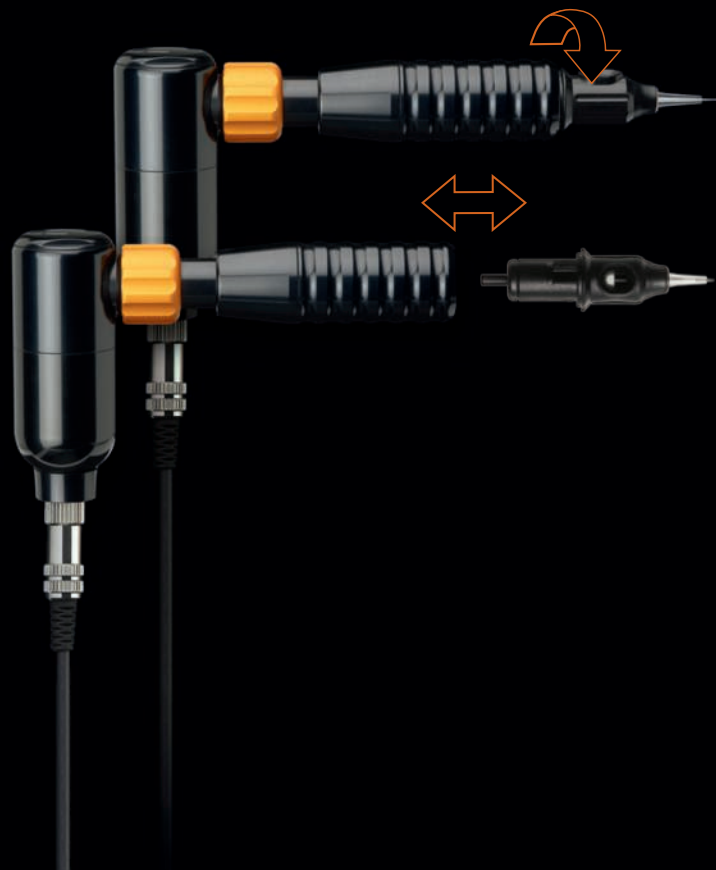

**The innovation for professional tattoo artists!**

Small, light and flexible: this is how the HAWK, made by CHEYENNE, is revolutionizing the tattoo world and tattoo art! Tattooing using this machine is simpler and much easier to manually do than with traditional machines. It adjusts to every movement being made as well as to the working environment and situation. High-quality and high-level technology thereby supports free artistic expression. The HAWK is easily held and gripped – therefore the ideas of the tattooist are

optimally transmitted in every type of situation. In addition, it has at its disposal a much higher puncture force and frequency than the old, traditional devices. A further plus is the uncomplicated handling: The front part of the machine can be easily tilted against the motor and the puncture depth can be set without much effort by turning at the grip. Changing from the liner to the shader is quickly and precisely doable – just click and turn!

**CHEYENNE HAWK – the smart solution for experienced tattoo artists!**

#### **Clever and a thought out all-rounder!**

The large number of needle configurations by CHEYENNE allows for a multitude of possibilities with regard to the artistic realization. Thanks to the different sizes of liners and shaders, there are no limits for the artist when it comes to individual design and form.

The industrial manufacturing of the needle heads guarantees the highest level of precision when guiding the needles. Apart from a very exact puncturing precision, the cartridges ensure clean and gentle, low impact punctures. Hereby the artist gets a much clearer picture and better overview. For the customer there is less pain and skin irritation while at the same time there is a quicker healing process for the skin.

# The Machine

Well thought out, sophisticated, flexible, powerful, lightweight and a low vibration level – these qualities make the HAWK an indispensable tool.

#### **Stay clean – simple and easy!**

Quickly interchangeable disposable materials ensure perfect and uncomplicated hygienic work! The CHEYENNE cartridges stand for health-conscious tattooing. Optimized safety, selected materials and sterile packaging guarantee ideal hygienic protection. The contamination of the machine is out of the question: the cartridges have their own integrated membrane that keeps the colors and the wound fluids away from the grip. In addition, the needles simply disappear back into the safety cartridge when switched off. In this way the handling of contaminated needles is avoided and both the clients as well as tattoo artists are provided with an additional safety aspect!

All of these features are combined within the HAWK in an optimal manner! Apart from the daily needs and requirements when one is tattooing, the machine also easily fulfills the much stricter hygiene regulations that are now in place. The professional medical design of the grip and the removable front part allow for uncomplicated decontamination and cleaning without having to use ultrasound or a disinfection process with the help of autoclave.

#### **Variety for freedom of choice!**

The continuously growing range and selection of needle heads of quite different configurations opens up more and more free space in which one can artistically fulfill oneself. The CHEYENNE liners are available in a variety of sizes and ensure accurate, fine lines with a high level of color insertion into the skin. The touching up of surfaces and areas is possible without a problem: from the darkest of blacks to very fine color gradings. The different shader gauges guarantee both quick and clean work on any pictures.

#### **Safety included for a good feeling – the CHEYENNE cartridge system!**

"A tattoo should be something that mirrors you. It is a piece of art that unfolds on your body. It should reflect who you are." Vicki Weskamp

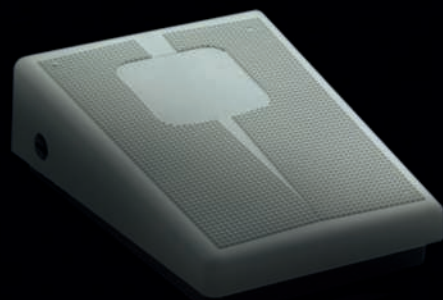

#### A technical revolution!

Innovation and a keen sense for the important customer needs are the basic features of the modern, high-tech products supplied by MT.DERM GmbH. That is why the new HAWK was developed and tested in accordance with the current needs of tattooists. Optimum operational use, ideal handling and a guaranteed long-life product are hereby guaranteed!

#### Fits perfectly!

The digital control unit POWER UNIT II (PU II) is especially optimized for use with the HAWK. It is small, space-saving and easy to transport. Up to two devices can be connected to the PU II. One can easily switch from one to the other. There are no turning or sliding controllers on the front – easy cleaning is guaranteed!

#### Needle configurations:

Artistic freedom with no limits – the large selection of needle heads for both liners and shaders makes it possible.

#### Fit for use!

The HAWK easily masters every body part and working position – both gently and precisely. The trick is: the front part of the machine can be easily tilted against the motor and the puncture depth can be set without much effort at the grip by turning.

## The Overview

The HAWK – the creative and hygienic all-round solution for tattoo artists.

#### Technical data of the HAWK:

Device Type: Tattoo Machine HAWK  
Frequency: 50-150 Punctures per Second  
Needle Amplitude: 3mm  
Puncture Depth: from 0 to 2.5mm  
Drive: Precision Motor – 12V DC  
Nominal Voltage: 5-12V DC  
Measurements: 110 x 75 x 25mm (W x H x D)  
Weight: approx. 110g  
Connections: PU II or Standard Tattoo Power Supply

#### Technical data POWER UNIT II:

Device Type: Tattoo Digital Control Unit PU II  
Nominal Voltage: 5-12V DC  
Power Consumption: 15VA  
Measurements: 110 x 165 x 55mm (W x H x D)  
Weight: 260g

#### We're convinced of our great product:

- Small and light: the HAWK ensures a relaxed working atmosphere!
- It lies ergonomically in the hand and can be precisely guided!
- Can be used for any part of the body and working situation!
- One can work in a very concentrated manner for hours on end without showing signs of tiring!
- Stress-free and quiet due to the high level of operational running smoothness!
- Suitable for every area and region of the skin as well as large needle configurations!
- Improved reaction to different skin types!
- Precise and a true-to-detail realization of ideas!
- Quick cartridge change and replacement!
- Simple setting of the puncture depth by turning at the grip!
- Optional power with the Power Unit II!
- Developed in compliance with medical guidelines ISO 9001:2000 and DIN EN ISO 13485:2001!
